Common Equity Capital Ratio

- Key focus of Basel 3 reforms is to strengthen the Common Equity (Core Tier 1) capital base for banks
- These reforms call for financial regulators to phase in an increase in the Common Equity Capital Ratio (CECR) requirements from 2013 to 2019 from 3% to >7%, comprising:
 - 4.5% minimum; plus
 - 2.5% capital conservation buffer; plus
 - potential for other prudential capital buffers in addition to any management buffer
- While APRA is yet to release the Basel 3 capital rules, including any detail regarding the implementation timetable:
 - In response to the GFC, ANZ has increased CECR to 8% - 9% range since Sept-08
 - ANZ expects that it would target to operate with a CECR in excess of 7%*
 - A CECR of 7% is equivalent to ~\$5bn in excess capital to the 5.125% Common Equity Capital Trigger (based on June-11 risk weighted assets of \$268bn)

Notes:

1. Includes 100% Common Equity deduction for Insurance Subs, Banking Associates, ELVEP, and higher market and credit risk weighted assets (RWA)
2. Fully aligned to Basel 3 for capital deductions and RWA calculation (IRRBB and Mortgage LGDs)
3. Basel 3 ratios are estimates based on ANZ's interpretation of Basel 3 principles and are subject to APRA clarification. Excludes RWA impact of Basel 3 liquidity reforms.

* ANZ gives no assurance as to what its CECR will be at any time as it may be significantly impacted by unexpected events affecting its business, operations and financial condition.
