Composite Benchmark

The fund is benchmark unconstrained but for performance comparison purposes the fund's performance is compared to the Composite Benchmark. The Composite Benchmark is simply an arithmetic average of all four indices: S&P Goldman Sachs Commodity Index (total return), Reuters/Jeffries CRB Index, DJ UBS Commodity Index (total return), and Rogers International Commodity Index (total return). The indices represent commodity futures prices which illustrate a broad and reliable benchmark for the performance of the commodity sector. Individuals cannot invest directly in an index.

Investment Objective, Policy and Risk

The Fund's investment objective is to generate growth in the long term through investment in commodity related instruments globally.

Indirect investment in commodities may cause the fund to face market risk from the value of the underlying asset together with geopolitical, supply, currency exchange rate and interest rate risks.

This fund is currently closed to subscriptions. The fund may reopen in the future when the manager believes that new inflows will not affect performance.

Investment Approach

The fund will be exposed to a range of commodity sectors and will be primarily invested in the agriculture, metal, and energy complexes. The fund will invest predominantly in a range of commodity derivative related instruments, principally comprising of futures and other commodity linked derivative instruments, and, to a lesser extent, equities and cash. The fund will not acquire physical commodities directly. The fund will neither employ leverage nor engage in short selling.

Our research process combines both top down analysis of global conditions with bottom up analysis of individual commodity markets, all with the aim of identifying trends and the resulting opportunities. Our investment universe comprises of 64 commodities, with close focus on 40. We employ an active approach to portfolio management and, at times, may carry a high degree of portfolio turnover. Fundamental analysis forms the core of our investment process to which we compliment through quantitative, technical, and sentiment analysis to achieve optimal returns over time.

All fund performance data are on a NAV to NAV basis, net income reinvested. Data is not available for the time periods with no % growth stated. In case a share class is created after the fund's launch date, a simulated past performance is used, based upon the performance of an existing share class within the fund, taking into account the difference in the Total Expense Ratio.

Performance data quoted represents past performance; past performance does not guarantee future results. The investment return and principle value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance data quoted.

Some performance differences between the fund and the benchmark may arise because the fund performance is calculated at a different valuation point from the benchmark.

Essential Statistics Since Launch

	Fund	Benchmark
Annual Volatility (%)	19.82	24.45
Alpha (%)	6.53	---
Beta	0.70	---
Information Ratio	0.63	---
Sharpe Ratio	0.00	-0.31
Jensen's Alpha (%)	5.44	---

The above ratios are based on bid to bid price based performance data over the last 3 years.

Volatility: A measure of standard deviation of return measures the average deviations of a return series from its mean, and is often used as a measure of risk. A large standard deviation implies that there have been large swings in the return series of the manager.
Sharpe Ratio: A risk-adjusted measure of return which uses standard deviation to represent risk.
